INTRODUCTION

RPC Astrapak is a specialised manufacturer of an extensive range of rigid moulded, and thermoformed plastic packaging products serving the African market.

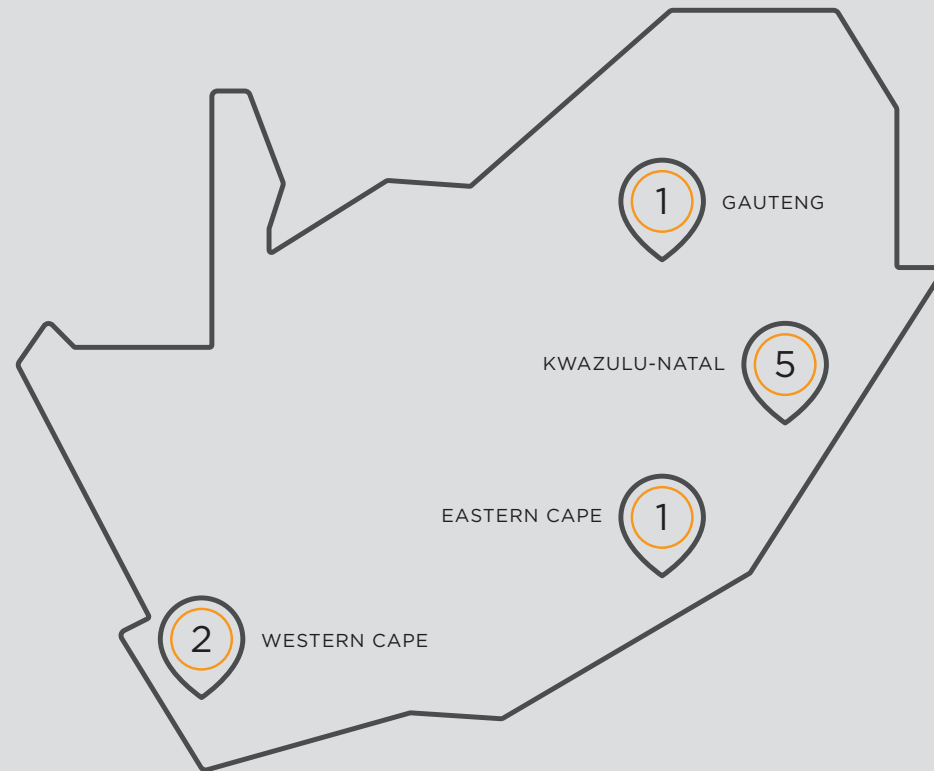

The Group focuses on innovation-led growth in plastic packaging and is structured for long-term sustainability through a balance of organic and project-based growth.

In June 2018, RPC Astrapak acquired Spec Group, which is made up of three well-known businesses being Spec Tool & Die, Spec Design and Spec Molders. The acquisition was a major milestone in the expansion of RPC Astrapak, providing the company with its own in-house design and mould-making capability along with an experienced management and manufacturing team.

The three divisions which define RPC Astrapak are:

- Moulding
- Forming
- Innovation and Design

MOULDING

RPC Astrapak's Moulding Division is the biggest of the Group's two manufacturing divisions and falls within the rigid plastic packaging spectrum.

ABOUT MOULDING

With six plants across South Africa, Moulding provides a range of markets with superior quality plastic packaging solutions. From the petrochemical market to the cosmetics, food and personal care markets, RPC Astrapak ensures that their client's premium product is packaged to the highest quality standards.

TECHNOLOGY

A wide range of closures, jars, bottles, tubes, cups, tubs and other plastic containers up to a size of five litres are manufactured through the process of extrusion-blow moulding (EBM), injection-blow moulding (IBM) and injection moulding (IM). Decorative techniques include foiling, pressure sensitive labelling, sleeving and printing. RPC Astrapak Marcom serves the dairy market and manufactures thin walled injection-moulded tubs, containers, lids and cups for dairy applications – with in-mould labelling and offset decoration technologies.

MARKETS

Moulding services the automotive lubricant and industrial chemical, food, personal care, home care and cosmetic markets offering customised product to customer's specifications.

FORMING

Forming is one of two manufacturing divisions of the Group and is categorised as a Rigid product manufacturer. The Forming division has two plants in South Africa, both located in the Western Cape.

ABOUT FORMING

Forming provides the market with a wide range of thermoformed and moulded packaging, improving and enhancing their customer's shelf presence. Forming products include thermoformed cups, tubs and trays for dairy and other food applications, together with decorative options. These products have become market leaders in the dairy industry with Forming developing bespoke packaging tubs for some of South Africa's prominent dairy brands and chain stores.

TECHNOLOGY

RPC Astrapak Thermopac and RPC Astrapak Plastform's facilities extrude their own sheet requirements. Plastform has a state-of-the-art sheet extruder to produce sheet film that is then thermoformed. There is an extensive range of generic products available to the market, and both operations also offer the opportunity to develop a unique shape offering to its customer base.

MARKETS

Forming has a well-established presence in the Dairy, Food and Beverage markets, offering their customers a unique and competitive advantage.

INNOVATION AND DESIGN

RPC SPEC INNOVATION & DESIGN CENTRE

Established in 1991, the Durban-based company specialises in the design, manufacture and repair of plastic moulding tools and dies. Spec Tool & Die established Spec Molders, a manufacturing arm of the business, in 2004; and Spec Molders was integrated into the existing operations during September 2018.

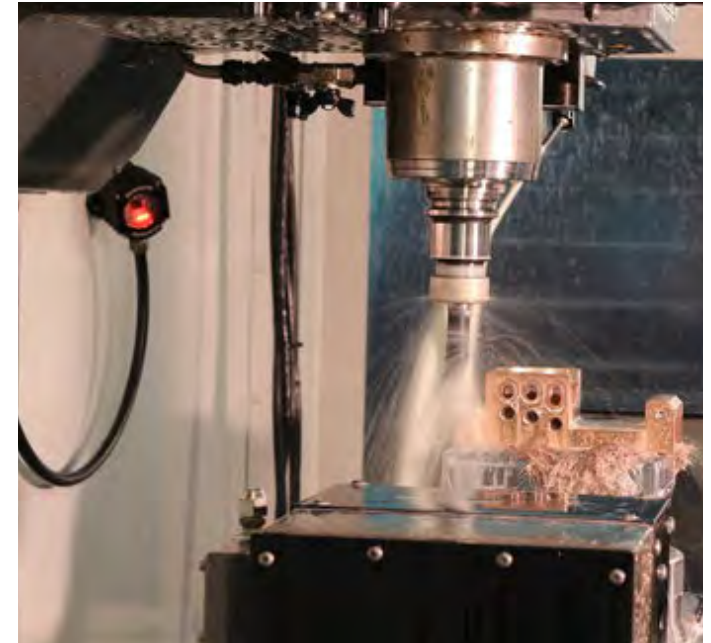

Spec Group is widely renowned as one of South Africa's largest independent and most innovative toolrooms through Spec Tool & Die and Spec Design. Their reputation is proven by the immensely successful partnership already demonstrated through the award-winning innovative designs achieved in conjunction with RPC Astrapak prior to the acquisition.

By creating a dedicated Innovation and Design Centre for RPC Astrapak, we link up with RPC's global network of 32 similar facilities, thereby bringing the Group's engineering and expertise to the South African market, and in time the African market, as expansion plans evolve.

For those bespoke products that don't "fit the mould", let our innovative design team present a unique packaging solution for you and your brand to differentiate your packaging in the market place.

ACCESSING RPC THROUGH RPC ASTRAPAK

The acquisition of Spec Group strengthens RPC Astrapak's synergy with RPC Group. RPC has a successful track record of innovation and speed to market using world-class technology, which RPC Astrapak is now in a position to access and emulate.

INDUSTRY WASTE MANAGEMENT PLAN & SUSTAINABILITY

AIM OF IWMP

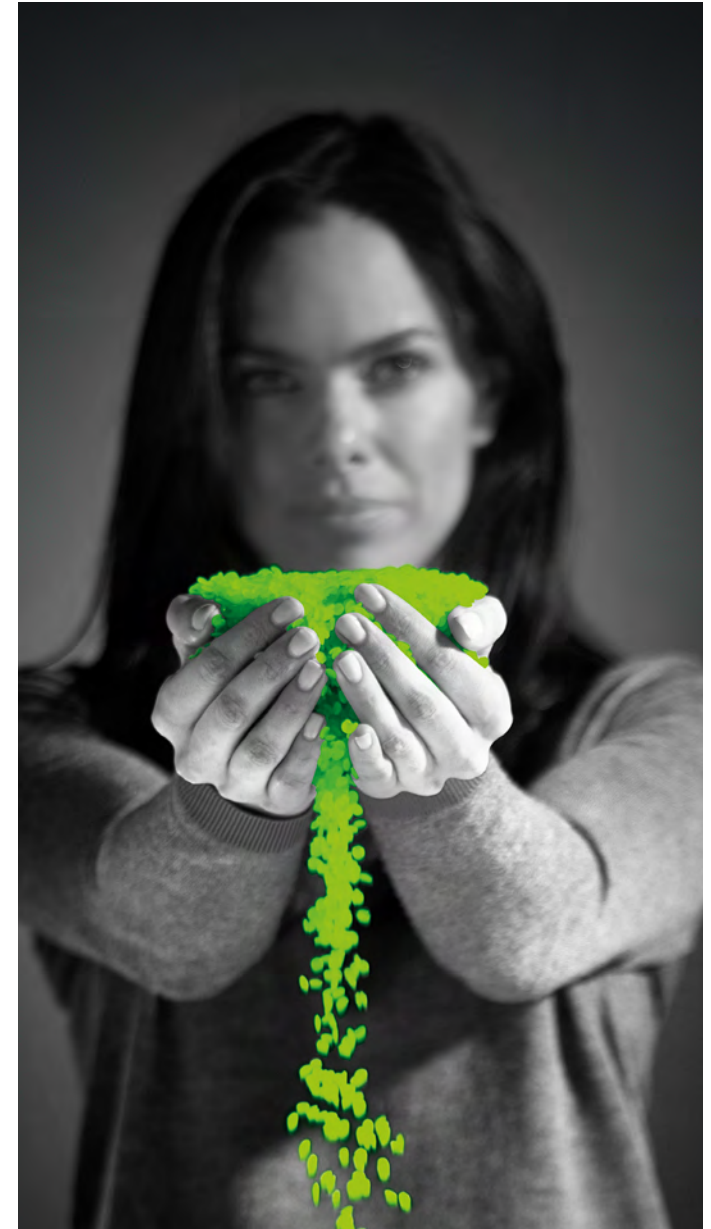

- To improve the overall waste management in SA
 - To reduce waste to landfill
 - To create well-structured and formalised industry to control waste to landfill
 - To represent all packaging converters and brand owners

PROPOSED BENEFITS

- Waste reduction and improved resource efficiency
- Cost savings in plastic recycling
- Lowered environmental impact
- Greater safety for workers, minimising impact on surrounding communities
- Improve awareness through empowering workers and communities

SUSTAINABILITY MATTERS

- Creating a sustainable future for generations to come is a core commitment of the RPC Group
- Sustainability underscores everything that we do – both the products that we manufacture and the way we run our operations
- We work to ensure that we meet all our own environmental responsibilities and to help our customers achieve theirs
- Lightweighting for transport makes a significant contribution to reduce carbon footprint and minimise raw material usage
- Circular economy – maintain a closed loop process to reduce waste to landfill
- Contribute to organisations like Polyco for recycling packaging
- Currently using rPET and rHDPE in our manufacturing process

SECTION 6 //

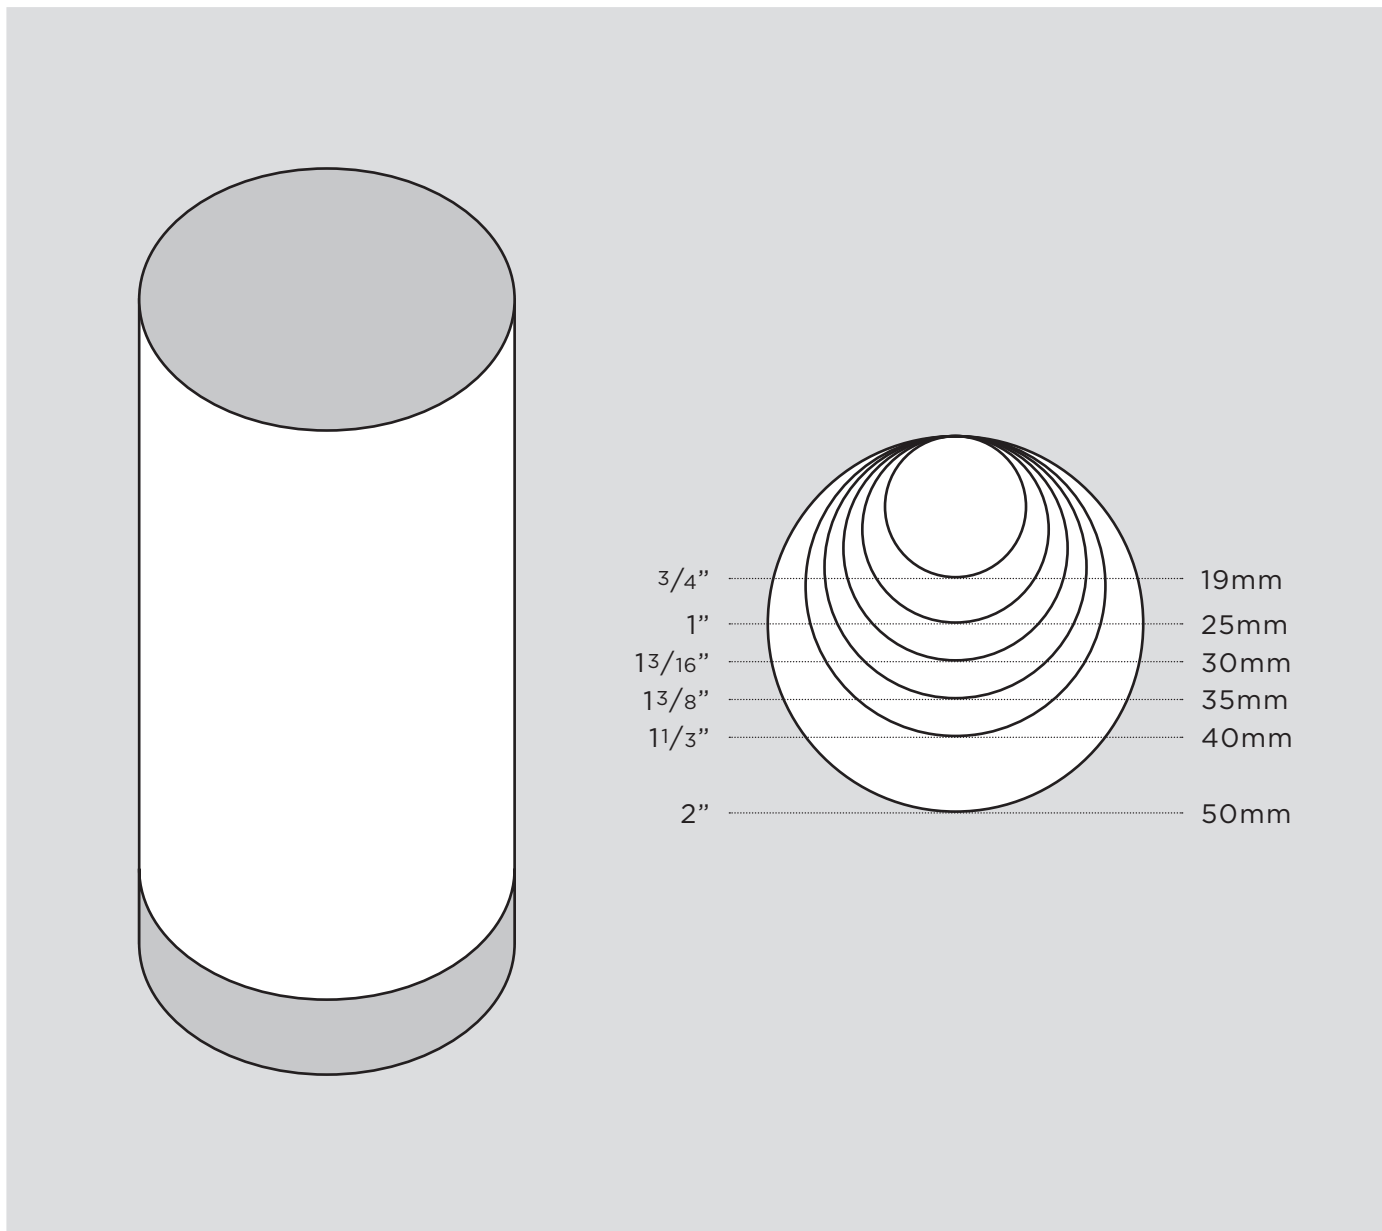

TUBES

MONOLAYER TUBES

RPC Astrapak's tubes can be manufactured as Monolayer or EVOH Multilayer. The type of tube that is manufactured is largely dependent on the type of product that is being packaged. Unless compatibility trials have been conducted on monolayer tubes and found to be successful, we strongly advise that the following products are packaged in Multilayer tubes:

- SPF
- Essential Oils
- Organic Ingredients
- Clear Gel products
(Face Wash, Body Wash, Hand Sanitizers)

EVOH MULTILAYER TUBES

GAS BARRIER PROPERTIES

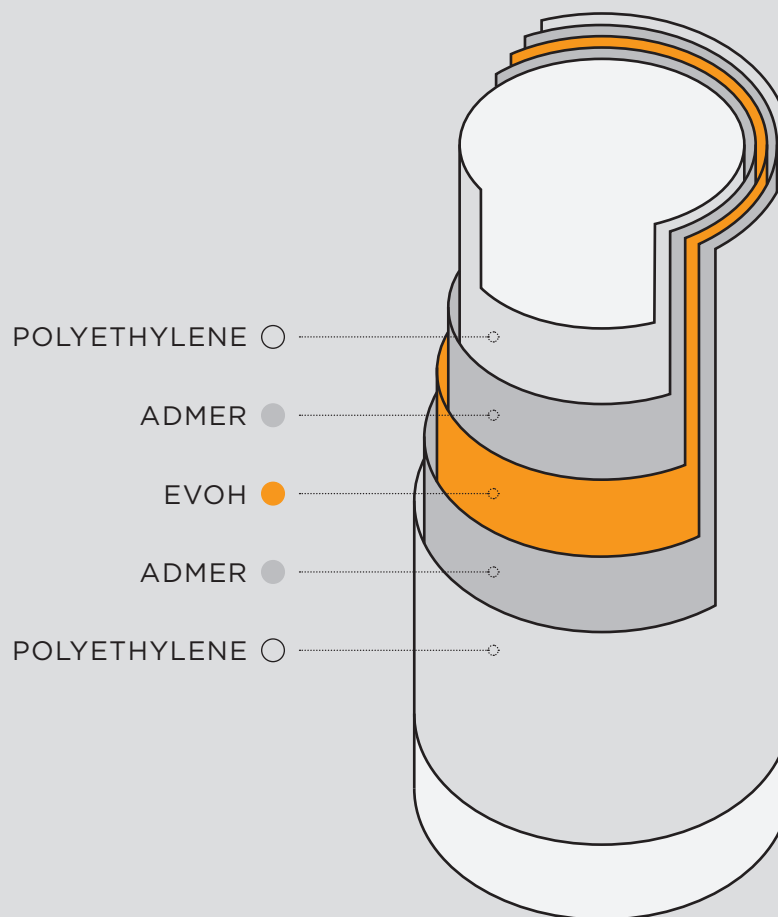

EVOH (Ethylene Vinyl Alcohol) resins offer outstanding gas barrier properties, which are superior to those of any other conventional polymer. Food quality generally deteriorates due to the presence of oxygen, EVOH effectively enhances flavour and quality retention by preventing oxygen from penetrating through the package.

RESISTANCE TO OIL AND ORGANIC SOLVENTS

EVOH's resistance to oils and organic solvents is very good. EVOH is therefore suitable for packaging oily foods, edible oils, mineral oils, agricultural pesticides and organic solvents.

AROMA AND FLAVOUR PRESERVATION

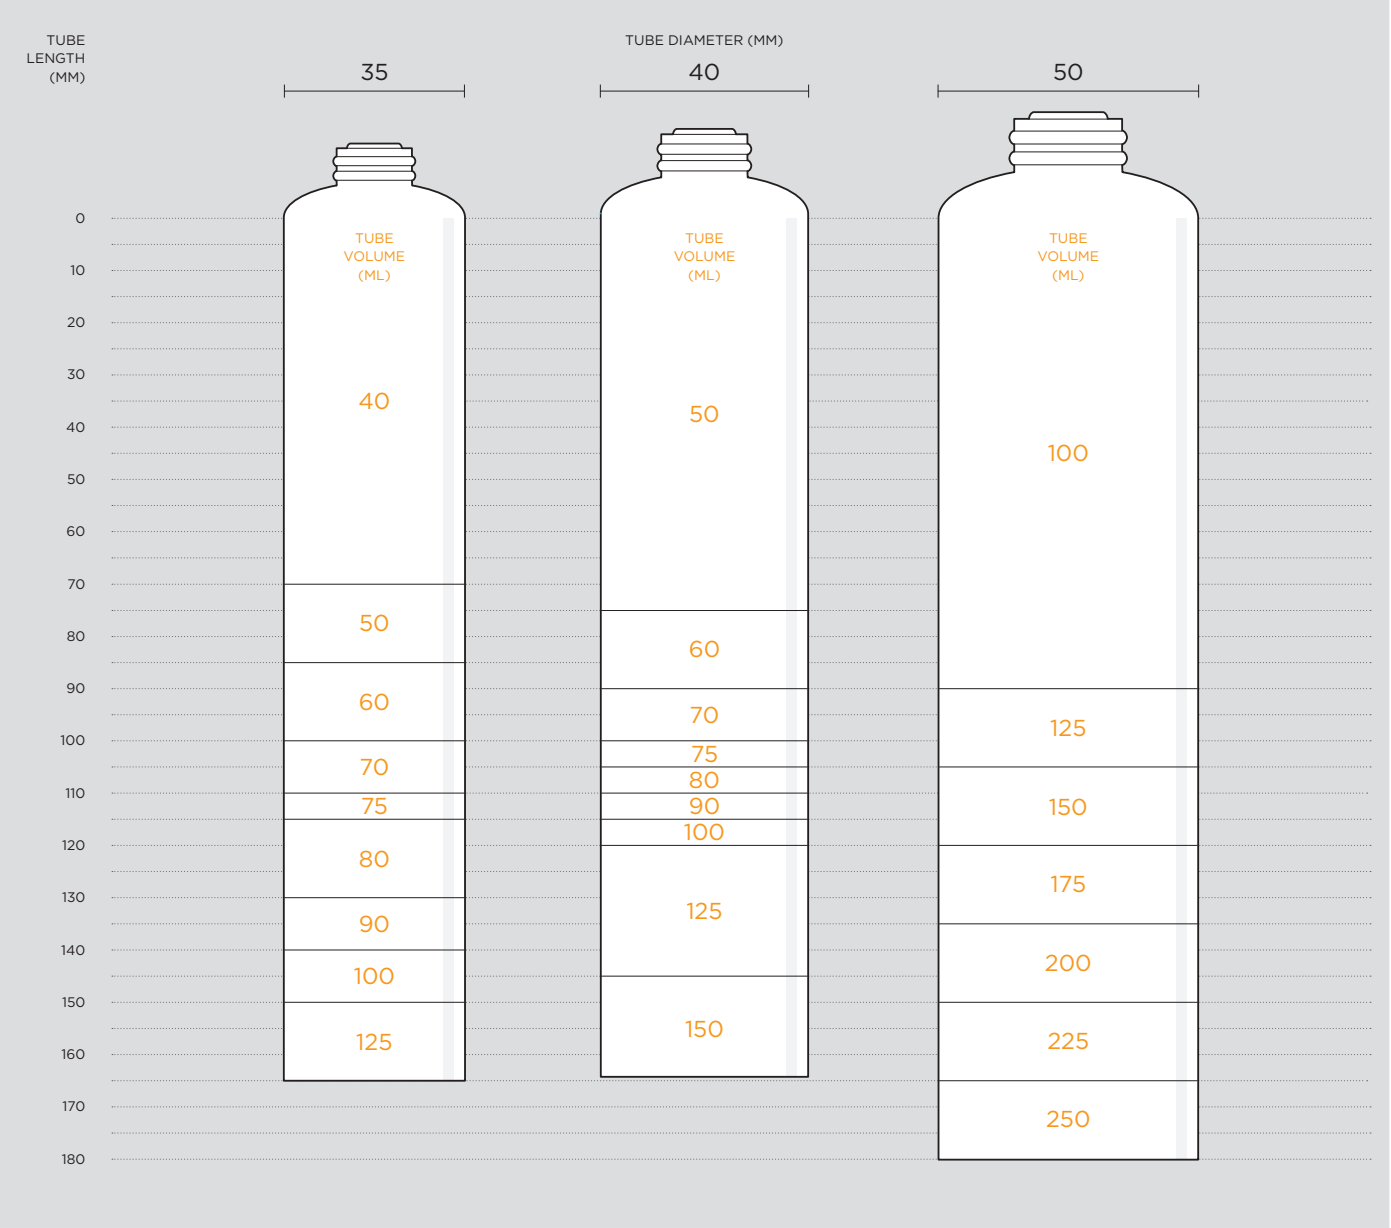

EVOH based packaging is effective in retaining fragrances and preserving the aroma and flavour of the contents within the package for the desired period of time. At the same time, undesirable odours are prevented from entering the packaging.

PRODUCT VOLUME
FOR SNAP ON TUBES

Use the guides below to work out the length and diameter tube that you require for your volume of product.
Tube diameter is set, the length of tubing can be adjusted.

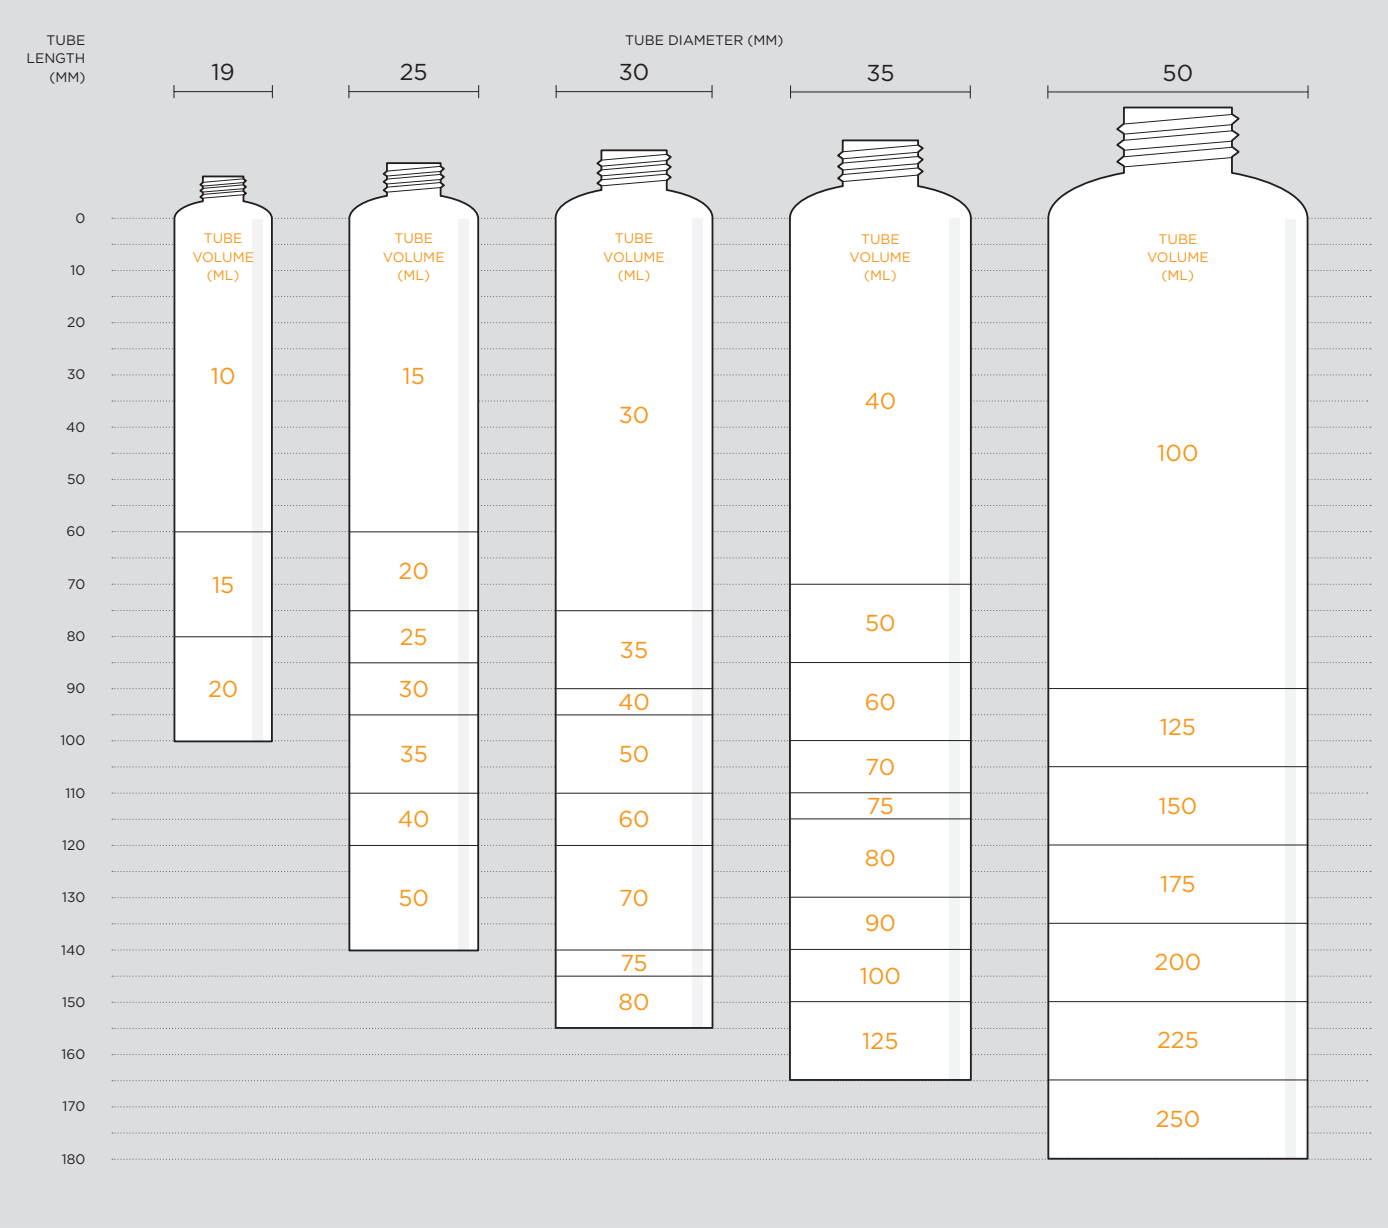

These values are approximates only.

PRODUCT VOLUME
FOR SCREW ON TUBES

Use the guides below to work out the length and diameter tube that you require for your volume of product.
Tube diameter is set, the length of tubing can be adjusted.

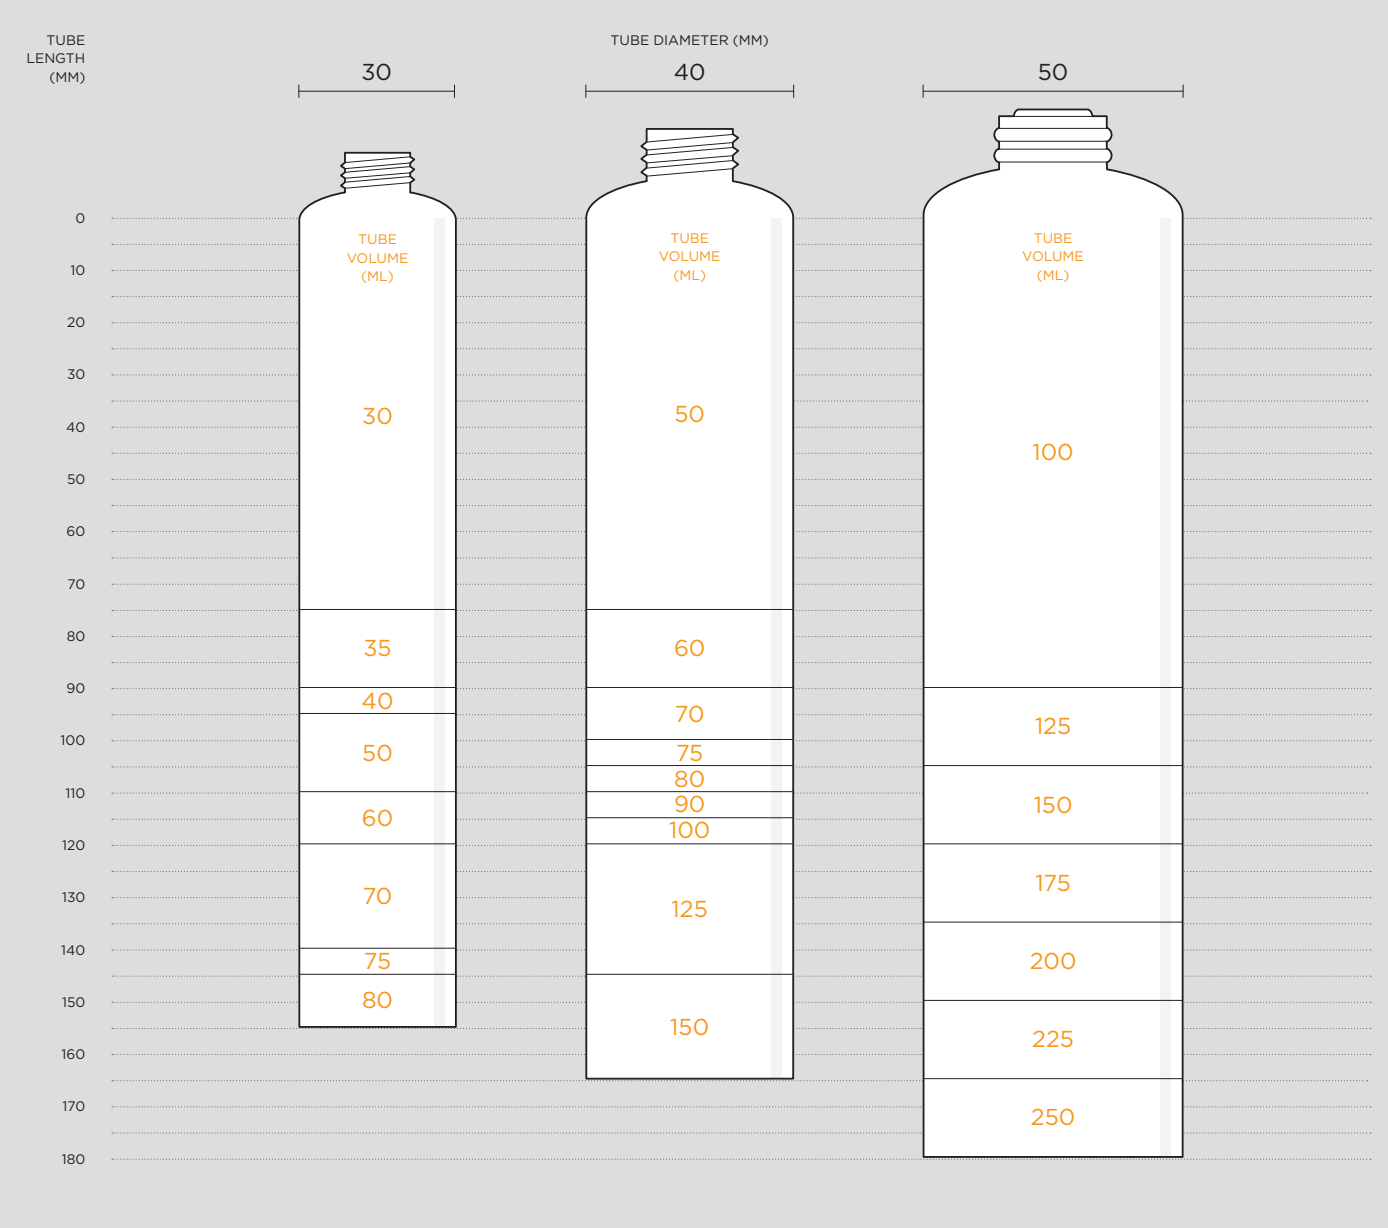

These values are approximates only.

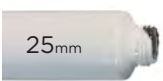

PRODUCT VOLUME
FOR OVAL TUBES

Use the guides below to work out the length and diameter
tube that you require for your volume of product.
Tube diameter is set, the length of tubing can be adjusted.

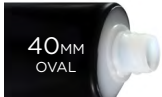

These values are approximates only.

FEATURES

Available in many different sizes with a multitude of decorative options. RPC ASTRAPAK's range of tubes combine aesthetic appeal with functionality. Available in mono layer, 2 layer or 5 layer (including EVOH) configurations. RPC ASTRAPAK tubes can be used in the most demanding applications.

1. TAMPER-EVIDENT BANDS ON ALL FLIP-TOP CAPS

Offers retailers and consumers ultimate protection against in-store browsing and tampering.

2. DECORATIVE FOILING ON CAPS AND TUBES

Caps and tubes can be foiled on circumference to enhance product image.

3. VARIETY OF VARNISHES

To provide matt/gloss appearance and varied textures for feel.

4. ALIGNMENT OF FLIP-TOP CAPS WITH FRONT PANEL OF TUBE

Provides for excellent on-shelf presentation and user-friendly orientation.

5. LABELLING

Accurate patch and wrap around labelling ensures the most demanding designs can be used on tubes.

6. ABILITY TO PRINT IN CMYK

Provides more flexible options for design.

7. MULTI-COLOUR SCREEN PRINT DECORATION

Features bold, accurately aligned colour decoration.

8. FOIL SEALS ON ALL SCREW TOP TUBES

Ensures integrity of product to end-users.

9. SPECIAL APPLICATIONS

Add consumer appeal and ease of use.

10. EXTRUDED TUBE BODY

Consistent wall thickness for uniform feel and quality printing.

11. HIGH-TECH IN-HOUSE QUALITY INSPECTION

Ensures product conforms consistently to the most stringent international specifications.

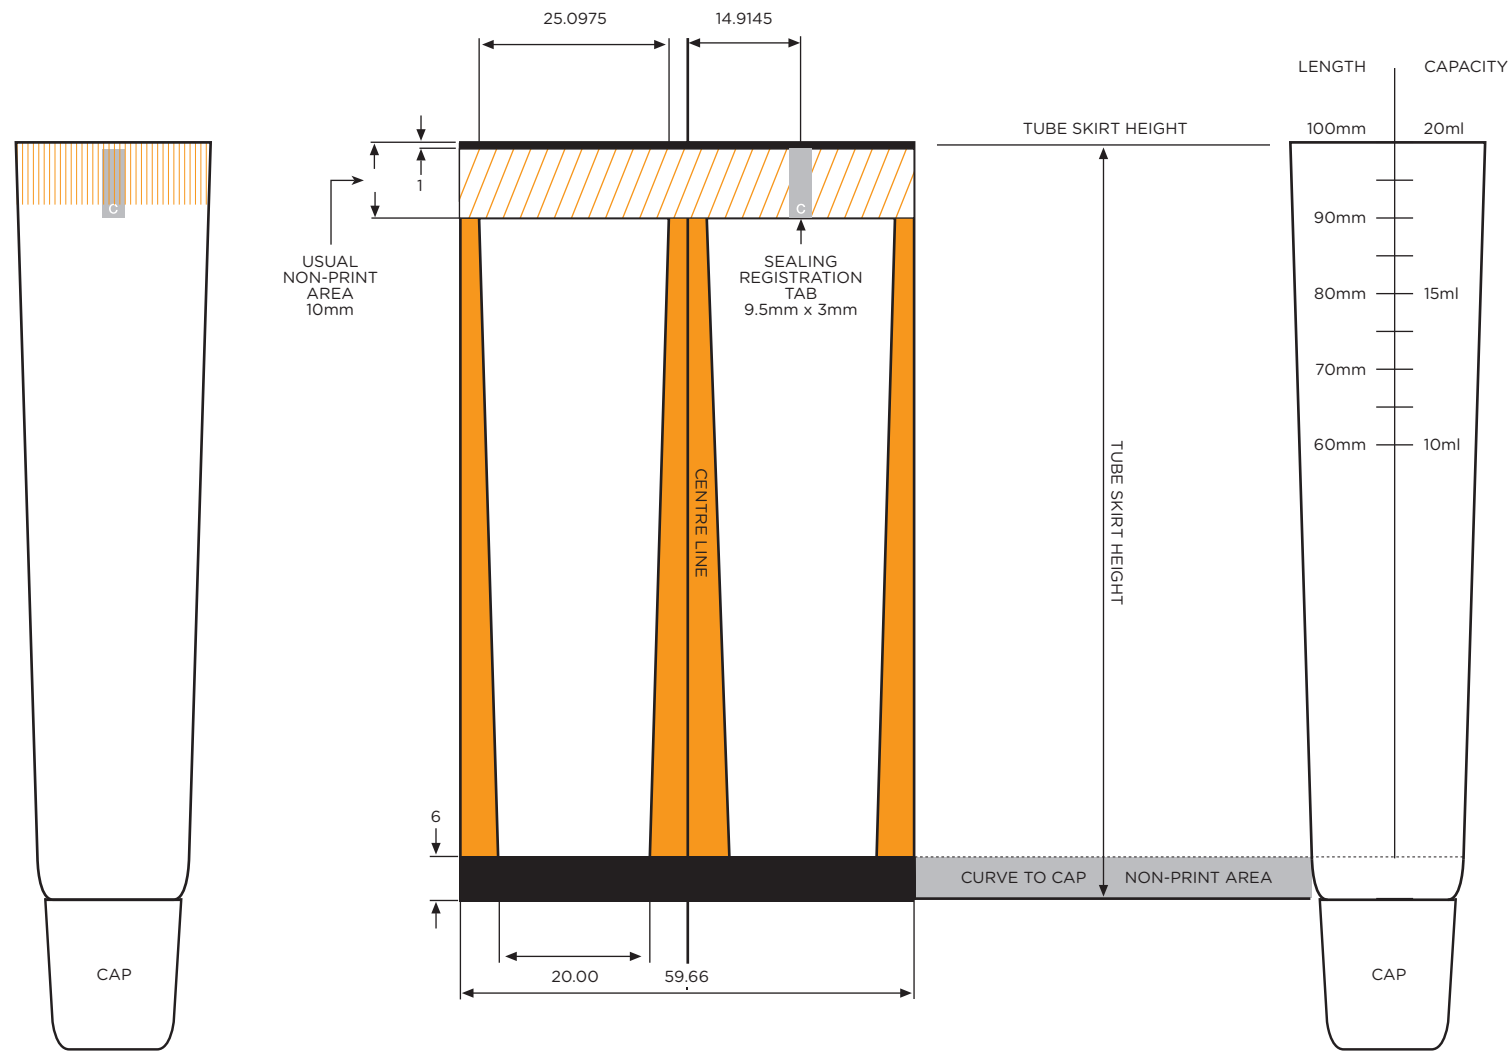

12. STATE-OF-THE-ART MANUFACTURING AND DECORATING TECHNOLOGY

Allows for efficient production runs of all sizes from a minimum of 5000 units to large, continuous runs.
